# Drip Irrigation System

-by Gokul Poly Valves Pvt. Ltd.

# About Us

## Gokul Poly Valves Pvt. Ltd.

Drip irrigation is the most efficient water and nutrient delivery system for growing crops. Gokul Poly Valves established in **2001** and manufacturing, supplying of all types of vales which is used in drip irrigation System. We manufactured **Ball Valves**, **PP Ball Valves**, **Non-Return Valves**, **Foot Valves**, **Irrigation Ball Valves**, **PP Drip Irrigation Ball valves**, **PP Drip Irrigation valves**, **Drip Irrigation Pipe**, and pipe fittings.

## Why Drip Irrigation is preferred?

- » Higher consistent quality yields
- » Huge water savings: no evaporation, no run off, no waste
- » 100% land utilization - drip irrigates uniformly in any topography and soil type
- » Energy savings: drip irrigation works on low pressure
- » Efficient use of fertilizer and crop protection, with no leaching
- » Less dependency on weather, greater stability and lower risks

## The advantages of drip irrigation are:

- » Fertilizer and nutrient loss is minimized due to a localized application and reduced leaching.
- » Water application efficiency is high if managed correctly.
- » Field leveling is not necessary.
- » Fields with irregular shapes are easily accommodated.
- » Recycled non-potable water can be safely used.
- » Moisture within the root zone can be maintained at field capacity.
- » Soil type plays a less important role in the frequency of irrigation.
- » Soil erosion is lessened.
- » Weed growth is lessened.
- » Water distribution is highly uniform, controlled by the output of each nozzle.
- » Labour cost is less than other irrigation methods.
- » Variation in supply can be regulated by regulating the valves and drippers.
- » Fertigation can easily be included with minimal waste of fertilizers.
- » Usually operated at lower pressure than other types of pressurized irrigation, reducing energy costs.
